Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/662,758

Applicant(s)

OLENICK ET AL.

Examiner

EDWYN LABAZE

Art Unit

2876

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 April 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9, 11-34, 52, 54-57, 60, 137 and 138 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9, 11-34, 52, 54-57, 60, 137-138 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Receipt is acknowledged of amendments filed on 4/20/2006.
2. Claims 1-9, 11-34, 52, 54-57, 60, 137-138 are presented for examination.
3. This application claims the benefits of 60/446,817 filed on 02/11/2003; 60/411,268 filed on 9/16/2002; 60/432,941 filed on 12/11/2002; and 60/466,689 filed on 4/30/2003.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-9, 11-14, 17-19, 20-22, 26-34, 52, 54-57, 60 and 137-138 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zagami (U.S. 6,801,907) in view of St. Vrain (U.S. 7,028,012).
6. Re claims 1-4, 9-10, 31-38, 43-44, 49-52: Zagami {herein after referred as "Zagami '907"} discloses system for verification and association of documents and digital images, which includes a camera 100 {also a scanner 102} for taking a photograph of a user, the photograph defining a user's photograph (col.8, lines 22+); a printer {through the document generated 108} (col.8, lines 30+); identification card media 200 {which could be a badge, visitor pass and the like}, the identification card media including at least one predefined identification card boundary (as shown in fig. # 5); and computer readable media {which could to be broadly interpreted as a software program}, wherein Zagami described the processing means as means to perform steps

Art Unit: 2876

of storing an access permission designator in the database, querying the database to retrieve the access permission, see col.9, lines 30+; further method for control which utilizes at least one camera 434 operable to record a digital image of a person and issues a visitor pass combined with an image, see col. 10, lines 18+} containing computer instructions capable of causing a programmable computer operatively connected to the camera, the printer, and to a user interface, to prompt the user to input the user's name at the user interface {herein in flowchart of fig. # 5} (col.10, lines 50+); cause the camera to take the user's photograph, cause the printer to print identification card 512 indicia including at least the user's name and photograph onto the identification card media within the predefined identification card boundary. Zagami further teaches means of storing the time the user creates the identification badge and exits the facility, a sensing mechanism {herein a bar code reader 320} located at point of exit (col.10, lines 40+).

St. Vrain teaches system and method for ordering customized identification documents via a network, which includes means of manufacturing identification documents wherein the user can preview and approve a facsimile of the identification document (col.5, lines 15+), means of using database modules non-volatile memory (col.7, lines 44-56), Internet connection (col.6, lines 47+); a card layout (as shown in fig. # 3-6), means of generating an email address associated with the user (col.4, lines 1-3; also see claim 10).

In view of St. Vrain's teachings, it would have been to an artisan of ordinary skill in the art at the time the invention was made to employ into the teachings of a computer readable medium having instructions/commands operable to starting up the system, generating/creating the ID card, and printing the card and wherein the inputted data is stored in a non-volatile memory. Furthermore, such modification would provide a step-by-step guide-through to a user

Art Unit: 2876

{especially if the system is self service i.e. a kiosk or a non-personnel desktop system} wherein the software programming interrogates a command {please enter your destination, length of visit duration, name of person related to the visit, and the like} and executes each user's input until determining whether or not to print the identification document; preview the document before finalizing and accepting a customized format of the document; and storing all inputted information a non-volatile memory capable of being rewritten with a number of user ID card distributed to authorized users. Moreover, such modification would have been an obvious extension as taught by Zagami.

Re claims 5, 42: Zagami '907 teaches a system, wherein the user's name at the user interface by swiping a driver's license through a magnetic card reader {as shown in the guard registration and disclosed as the entry reader or card reader 616} (col.10, lines 50+; col.11, lines 20+).

Re claims 6, 41: Zagami '907 discloses a system, wherein the user inputs the user's name at the user interface by selecting a name from a pick list (col.3, lines 8+; col.8, lines 61+).

Re claim 7: Zagami '907 teaches a system, wherein the user inputs the user's name at the user interface by spelling his name on either a keyboard or a touch screen 432/614 (col.10, lines 16+).

Re claim 8: Zagami '907 discloses a system, wherein the camera is a webcam [herein broadly interpreted as a digital camera 100} (col.8, lines 24+).

Re claim 11: Zagami '907 teaches a system, wherein the camera and the printer are housed within a self-serve kiosk (as shown in fig. # 4; col.5, lines 55+).

Re claim 12: Zagami '907 discloses a system, wherein the printer is a desktop printer (see fig. # 3).

Re claim 14: Zagami '907 discloses a system, further a log creation module the log creation module capable of retrieving {Zagami teaches means of retrieving a unique identifier; see col.9, lines 30+, wherein the identifier is associated with the person to whom the card is created and said unique identifier is stored in a secure database 106; see col.8, lines 25+} names and photographs of a plurality of users for whom photographic identification cards have been created, and generating reports pertaining thereto (col.11, lines 20+).

Re claim 17: Zagami '907 teaches a system, further comprising a bar code reader, and wherein the identification card indicia printed on the identification card indicia includes a bar code which can be read by the bar code reader/scanner 102 (col.9, lines 10+).

Re claim 18: Zagami '907 discloses a system, wherein the identification card indicia printed onto the identification card includes additional information {herein the company affiliated of the visitor} entered by the user (see fig. # 5).

Re claim 21: Zagami '907 discloses a system, wherein the identification card indicia printed onto the identification card includes additional information {herein broadly interpreted as the unique identifier associated with the card} entered by someone other than the user (col.8, lines 30+).

Re claim 22: Zagami '907 teaches a system, wherein the identification card boundary comprises a boundary of the identification card media, the identification card media being less than a full size 8-1/2 x 11 inch sheet and less than an A4 size sheet (see fig. # 5 for the proposed badge 512).

Art Unit: 2876

Re claim 28: Zagami '907 as modified by St. Vrain discloses a system, wherein the computer instructions include a photo retake function that allows a visitor to preview an image of a first photograph taken of him by the camera, and allows the visitor to initiate the taking of a second photograph for printing onto the identification card instead of the first photograph (see fig. # 5).

Re claim 39: Zagami '907 as modified by St. Vrain discloses a system, wherein the user identifies himself via biometrics (col.5, lines 15+).

Re claim 47: Zagami teaches a system, further comprising verifying that the entrant is authorized to enter the facility by electronically comparing information provided by the user against a list {herein interpreted as a database or network memory 204} of authorized entrants (col.8, lines 40+).

Re claim 48: Zagami discloses a system, wherein the list of authorized entrants is maintained at a location remote {herein at the management terminal for correlating read data at the entrance against the file server} from the equipment (col.9, lines 65+; col.10, lines 1+).

Re claim 53: Zagami teaches a system, further comprising the step of providing a person at a location remote from the facility entrance, the remote person performing step based upon successful/positive completion (col.9, lines 65+; col.10, lines 1+).

Re Claims 54-57: Zagami discloses system for verification and association of documents and digital images, which includes a gangway systems comprising of five guard registration systems 312 and one exit, {each gangway system includes a photo registration station 310, a guard registration 312, a management/attendant terminal 318}; and wherein the photo registration can be moved to different locations as needed (col.9, lines 60-67; col.10, lines 1-25).

Art Unit: 2876

Zagami further teaches that the identification cards are photographic identification card (see fig. # 5), and wherein the assistance comprises audible two-way communication (col.10, lines 32+), a first and second computer interfaces connected to at least one computer for providing to the attendant an attendant terminal and assistance (col.10, lines 1-32).

7. Claim 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zagami (U.S. 6,801,907) as modified by St. Vrain (U.S. 7,028,012) and further in view of Zagami (U.S. 6,394,356).

The teachings of Zagami {hereinafter referred as “Zagami ’907”} have been discussed above.

Zagami ’907 fails to teach upon a second visit, means of recalling the retained data to create a second identification card.

Zagami {hereinafter referred as “Zagami ’356”} teaches a system, the system retains data pertaining to the user after a first visit by the user; upon a second visit {herein Zagami ’356 refers to frequent visitors}, the user can recall the retained data for use in creating a second identification card such that the user can avoid certain information entry steps that were required of the user upon the user’s first visit, and wherein the system prompts the user upon a first visit to enter an email address and the system stores the retained data in association with the email address; and upon a second and subsequent visit by the user the user can enter the email address whereupon the system will recall the retained data and use the retained data in printing a second identification badge (col.6, lines 40-67).

In view of Zagami ’356 teachings, it would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to employ into the teachings of Zagami ’907 as

Art Unit: 2876

modified by Chamey et al. means of creating a second identification card upon recalling the retained/stored data from the first visit so as to save time. Furthermore, such modification would enable to speed up the authentication process and enables management to issue the ID card only verifying the stored data and the relation of the visit.

8. Claim 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zagami (U.S. 6,801,907) as modified by St. Vrain (U.S. 7,028,012) and further in view of Haas et al. (U.S. 6,197,396).

The teachings of Zagami '907 as modified by St. Vrain have been discussed.

Zagami '907 as modified by St. Vrain fails to teach that the ID card/badge comprises a die cut, a two-sided identification badge, and wherein the identification card media comprises a paper label sheet.

Haas et al. teaches identification card strip assembly comprising of die cut 40 (as shown in fig. # 2), a two-sided card identification card 24 (as shown in fig. # 2; cols.5-6; lines 1-67), and wherein the card is a paper label sheet (col.2, lines 54-67).

In view of Haas et al.'s teachings, it would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to employ into the teachings of Zagami '907 as modified by St. Vrain a die cut, a two-sided identification badge, and wherein the identification card media comprises a paper label sheet so as to provide a means for inserting a clip to hold the card. Furthermore, the die cut facilitates the use of badge clip 62 for exposing the card at anytime during the visit, and the two-side information badge {as shown in fig. # 7-8, 13-15, enables or allows the management/system administrator to print or display more data related either to the

Art Unit: 2876

user or important data associated to the visit. Moreover, such modification would have been an obvious extension as taught by Zagami '907 as modified by St. Vrain.

Response to Arguments

9. Applicant's arguments with respect to claims 1-9, 11-34, 52, 54-57, 60, 137-138 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Burns (US 2003/0151761) teaches self-service entry control system.

Ono et al. (US 2004/0050931) discloses ID card, ID card issuing device, and ID card reading device.

Simpson et al. (US 2004/0205652) teaches system and method for producing business cards.

Sanse et al. (US 2005/0058369) teaches apparatus, method and program for generating photo card data.

Liu (US 2005/0168775) discloses method and computer program product for in-house digital photo/card processing and printing/cutting production.

Adam et al. (US 2005/0284931) teaches digital transaction recorder with facility control.

Garcia et al. (US 2006/0087410) discloses facility access control system including temporary personnel identification badges with expiration indicia.

Art Unit: 2876

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to EDWYN LABAZE whose telephone number is (571) 272-2395. The examiner can normally be reached on 7:30 AM - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2876

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
